

BOM Revisions

Last Modified on 03/31/2021 3:28 pm EDT

The BOM Revisions feature in All Orders allows snapshots of the BOM to be saved to the database and then later accessed. There is no limit to the number of revisions that can be generated for each assembly. Simply click the Revisions tab when editing any assembly item to view the current list of revisions. Click the button to add a new revision and enter an optional name and memo. Revisions may be deleted from the list as well in the case that one was made in error. Double click a revision from the list to view it in the BOM editing screen. Please note that revision data is read only.

The screenshot shows the 'Bill Of Materials' tab with the 'Revisions' sub-tab selected. A 'Create Revision' button is visible, along with input fields for 'Name' and 'Memo'. Below the form is a table listing existing revisions.

Version	Date	Name	Created By	Memo	Delete
3	2/12/2020 3:45:00 PM	Retreat BOM	admin		
2	6/5/2019 12:54:00 PM		admin		
1	6/5/2019 12:53:00 PM		admin		

Revisions may be setup to be auto generated each time a BOM is changed by your system admin in the company preferences.

The screenshot shows the 'Preferences' dialog box with the 'Company Preferences' tab selected. The 'Advanced' sub-tab is active, and the checkbox for 'Auto generate BOM Revisions every time a BOM is changed' is checked and highlighted with a red box.

- Step can only be used in one production center.
- Record work order in ledger when marked as 'History'.
- Copy Work Order custom fields between linked Work Orders
- Track classes on work orders
- When drilling down apply make times to newly created subassembly Work Order due dates.
- When changing the due date of a Work Order update the due date of all documents dependent on it accordingly.
- Enable entering Loss Factor % on BOMs
- Auto generate BOM Revisions every time a BOM is changed
