

# Error while creating step, converting string to datetime

Last Modified on 03/31/2021 3:28 pm EDT

With certain regional setting, you may getting an error creating a step relating to converting string to datetime.

The issue relates to how your regional setting show the date AM or PM.

For example, 4/5/2007 12:45:10 a.m. will generate an error.

In regional setting for time make AM symbol = AM  
and PM symbol = PM
