

# Can I assign one item number with multiple pricing detail?

Last Modified on 03/31/2021 3:28 pm EDT

In the menu Lists, Profile Lists, then Price Levels is where you can set additional item prices for your customers. It can be set for an individual customer, group of customers, or company-wide. Create a name of your price level, i.e. the customer's name. Use the drop-down button for Type. There are several choices, however in your case, choose Customer Item Price. Choose specific items or choose all items. Type in a new price or adjust the price by percentage and Save. Once you've set up the price level, open the customer and use the drop-down button to select your newly created price level
