

How to install an All Orders patch

Last Modified on 03/31/2021 3:29 pm EDT

If you are provided with a patch for your All Orders system you can follow the steps below to patch up any workstations using All Orders. If the patch does not change the version of All Orders it will only need to be installed on any workstation where the patched version is needed. If it is a new version, all workstations will need the patch.

-Unless otherwise instructed all files provided will go into the program files folder for All Orders. The files will replace existing ones. The typical path will be:

64 bit machine

C:\Program Files (x86)\NumberCruncher\All Orders

32 bit machine

C:\Program Files\NumberCruncher\All Orders

-Navigate to the following folders:

64 bit machine

C:\WINDOWS\SysWOW64

32 bit machine

C:\WINDOWS\system32

Find the cmd.exe command prompt application and right click and run as administrator. Once it is open paste in the following and press enter.

64 bit machine

```
regsvr32 "C:\Program Files (x86)\NumberCruncher\All Orders\AOLib6.dll"
```

32 bit machine

```
regsvr32 "C:\Program Files\NumberCruncher\All Orders\AOLib6.dll"
```

You should get a success message. Once complete the patch is installed on the workstation and you can begin using All Orders again.
